

JOB POSTING

Senior Blockchain Engineer (m/f/d)

Berlin, full-time | Starting immediately

Car eWallet is driven by the vision to make self-driving cars truly autonomous providing them with the ability to facilitate transactions on their own. The Car eWallet Transaction platform is built on blockchain, turning it into one of the very first projects that makes use of this groundbreaking technology in a real-world setup.

On our way to change the way people will experience mobility, we are looking for a product-driven Senior Blockchain Developer to join our open-minded and agile team consisting of developers, product people, business developers, designers, researchers, and project managers.

As a Senior Blockchain Developer, you are a vital element of our team driving the development and design of our platform's core and use-case specific features. You bring along well-founded experience in various aspects of systems engineering and development of decentralized applications and, thus, enrich our lively discussions with a strong opinion and an urge to build amazing software. You are excited to get involved with product planning, enjoy sharing knowledge and discover new technological possibilities together with the team.

JOB POSTING

Your responsibilities

- Shape the development of the Car eWallet platform and implement new use cases.
- Identify and address bottlenecks, implement critical parts of software.
- Develop or apply algorithms that provide pragmatic solutions to business problems.
- Develop and implement testing strategies to drive code quality.
- Take part in every step of development: designing, implementing, code reviewing and writing tests, deploying, monitoring and performing instrumentation.
- Create concepts for software architecture and analyze and rate existing ones.

Your profile

- Completed studies in software engineering or applied computer science.
- Minimum five years of professional experience in software development.
- Solid experience in Blockchain Technologies (e.g. Hyperledger Fabric).
- Solid experience of programming with Java and Go. Knowledge of other languages is a plus.
- Advanced knowledge in Spring Boot and modern software development patterns.
- Profound knowledge of Container Technologies, PaaS, Cloud infrastructure and microservices.
- Experience in designing, maintaining and improving high-performing REST APIs.
- Good analytical skills combined with a comprehensive understanding of development processes.
- High assertiveness with moderation and communication skills as well as the ability to work in an agile team (SCRUM, using tools like JIRA, Confluence and Gitlab).
- Structured working style, initiative, organizational and team skills.
- Ability to work in the dynamic environment of a startup and independently prioritize tasks; Commitment to delivery.
- Good command of spoken and written English, Speaking German is a plus.
- A confident and reliable appearance in contact with customers and suppliers.
- Willingness to teach and mentor less experienced developers.
